DotNetOpenMail

Address   {value_address}

Contact Person   {value_contact_person}

Mobile Number   {value_mobile_number}

Email   {value_email}

DotNetOpenMail is an open-source library which can be used to create multipart/alternative and multipart/related email in .Net or Mono. It is pure C# and does not depend on CDONTS, and it can be used as a replacement for System.Web.Mail. DotNetOpenMail also supports binary attachments and sending in any .net-supported character set.
