This tag allows you to embed an HTML editor in the place of a text area tag on forms. It gives your users the ability to submit formatted HTML without having to know the HTML markup language. Now with Mozilla support. The latest version of Mozilla (1.3) supports HTML editing so we've updated this tag to offer cross-browser support. Installation is easy, just drop the files into the CustomTags folder on your server or on a server under the web root and make your cfmodule call.
