EditPad is a general-purpose text editor, originally created to replace the Notepad applet that comes with Windows. It has all the features you want from a solid text editor, but no useless bells and whistles. Some notable features include: Open as many files at a time as you want, When you close an unsaved file, EditPad will either warn you, automatically save the file or do nothing, EditPad reads UNIX (LF only) and Mac (CR only) text files and can export files to both formats, ANSI <=> OEM (DOS ASCII) conversion, MAPI support for emailing texts, and more. Please refer to the homepage for non-english versions and 16-bit version.
