Email Validator Module .NET

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

EVM is an ASP.NET source code module which is ideally integrated with signup, registration & membership systems to provide email address verification. Validation links are sent to user's email addresses and are used to prove that a user has entered a correct email address that they have access to. The system is written in C# .NET and makes use of Microsoft Access databases and html templates to enable seamless integration into an existing site layout.
