

# Event Calendar with Entity Framework: Quick Guide and Sample

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

By covering the five simple steps of this tutorial you'll create an event calendar in ASP.NET MVC 4 that uses Entity Framework. The calendar offers standard calendar views and functions, such as simple drag-and-drop, Ajax loading, events load and save and an attractive and customizable appearance. The functionality can be extended when required.
