

# File Scope Replacer

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This package is meant to find and replace data in files. The replacer class takes a text data value to be found as well the replacement text. It scans files from a given directory to find and replace the specified data. The replacer class may either scan all files or just the ones that match a given regular expression. It may optionally scan sub-directories recursively. (thx2ml)
