Email	{value_email}

FileChucker is an AJAX-based web application that lets you accept file uploads on your own website. It's simple to install (just one file), packed with features, fully configurable, nice looking, and very handy for when you want to share files with anyone. And during uploads FileChucker shows a progress bar & table, so the user knows how much time is left before the upload is complete. FileChucker can also function as a full-fledged online file manager for your server: it can allow moving/renaming/deleting of uploaded files & folders right in the browser. Of course these features are configurable and password-protectable so you can customize FileChucker however you'd like. To top it all off, FileChucker works in all major browsers (Moz/FF, IE, Opera, Safari), and runs on virtually any server (Apache, IIS, OS X Server), with no programming required!
