Email	{value_email}

OK guys, this script is a simple file based counter. This is meant for sites that do not run a db and instead, use a file and a cookie. It isn't the best I've seen but it's simple. Consider this as a tutorial. Just create a file called counter.txt and put this where you want to display the counter. Remember to set the permissions on counter.txt so that your webserver can write to the file.
