FuzzyCompress allows you to speed up download/pageload times by compressing content before sending. All content types are compressed, and since compression takes place after other server-side processing, even ASP and PHP scripts can be cached. On average, file sizes are reduced by over 76% and download speeds are reduced by over 300%. FuzyCompress integrates easily with IIS 4.0, 5.0, and even 5.1! FuzyCompress supports side-by-side static, dynamic, and on-demand compression. Version 3 includes Auto-Configuration, which lets you choose the option that best fits your need and setup compression with the click of a single button.
