The Generated List Scroller is a system (.FLA file + accompanied necessary files) which creates a scrollable list in a flashmovie, generated from an external TXT file which contains the list-variables. It is developed to create systems/structures which use greater amounts of external SWF-files such as portfolio's and showcases and which change or must be updated regularly. Alternatively since version 1.3b now also supports loading html-pages into frameset frame pages. Current version include a large range of features including tree-menu foldout/pulldown option and search-option
