GuppY is a small web portal, meant to be easy to use for the end user and does not require a database to run. GuppY offers a full and secured administration interface to manage the look & feel of your web site as well as the content of the different headings of your site. GuppY offers the standard functionalities of a web portal: news, papers, links, downloads, photos displaying, guestbook, forum, FAQ, poll, visits counter, etc... GuppY has been ported to almost all existing languages. Version 3.0 update - major new features: - Possibility to "skin" your GuppY, i.e. to apply a graphic theme - A newsletter is from now on available, with the management of the registered people - Possibility to publish on your site, in the "RSS" standard format, the news coming from other sites - Two new more ergonomic dynamic menus have been added - The forum comes with an anti-flood system, to prevent the repeated posting of the same message. In addition, you have an option to batch-archive your forum, in order to improve the performances of this last one when it begins to be consistent - A new monitoring module enables you to control the accesses to your site, by consulting the logbook - A plug-ins management has been added, which will make it possible for the voluntary and interested developers to code more easily modules for GuppY Read the details of all improvements on the GuppY website!
