HTML Scripting Pages is a new client side, ASP compatible scripting plug-in for Internet Explorer. HSP makes it possible to run ASP webpages on any Windows PC without a webserver involved. You can run ASP pages in either Internet Explorer or the Microsoft webbrowser ActiveX control. With HSP, you can code the same mixed HTML and VBScript webpages, using the familiar ASP objects (eg. Session, Server, Request and Response). The only difference is that it runs entirely on the client Windows machine - in a single DLL. Display dynamically-generated HTML in your Windows apps in embedded WebBrowser controls just like Microsoft does in all of their new applications.
