IP Address to Country, Region, City, ISP and domain name in PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is PHP script to enable lookup of country, region, city, latitude, longitude and ZIP Code from IP address by using IP2Location database. The script supports several database types such as Microsoft Access, MS SQL and mySQL. Internet geolocation has been widely used in the products or projects below. 1) Select the geographically closest mirror 2) Analyze your web server logs to determine the countries 3) Credit card fraud detection 4) Software export controls 5) Display native language and currency 6) Prevent password sharing and abuse of service 7) Geo-targeting in advertisement
