jme is an HTML5 audio / video development kit with Flash and VLC Fallback, which focuses on flexibility, intuitive DOM-API and semantic code. Features with slightly API Changes (less configuration)  
----- - fullscreen plugin (usability): changed how we position the media-controls and media-state element - jmeEmbed (usability): setting JW-Player path automatically to the JS-Path - jmeEmbed (usability): setting wmode to transparent, if controls are false, the media element is a video element and param-configuration for wmode is undefined. - jmeControl (usability): controls are remove if jmeEmbed is called through jmeControl
