[jQuery Script] How to URL Hash to Define Content

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

On ASF(my project) in the user center i use the url hash to define what content should be loaded into the div. When a user clicks on a link it changes the content in the div, but a user can also change the content by changing the hash value in the url.
