JSMenu applet is a free treeview (treemenu) java applet, suitable to use as site navigation (site index) tool. JSMenu java applet can load its contents either from disk file or from server-side CGI. So, you can create your site contents (site index) dinamically. You can use javascript calls as URLs for JSMenu applet items. Free site search tool (JSearch Java applet) is incorporated. This site search tool allows to search through the site contents (TreeView structure) for any keywords like 'all words', 'any word' or 'phrase'.
