Link Rotator Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The basic principle is to create a url rotator portal and place several different urls (website pages) into the portal. Then everytime someone visits the portal page the urls will be rotated and the visitor will be transparently redirected to the next url in the list. You then only have to promote one page/url (the portal), rather than many! If you are trying to promote several websites, webpages, affiliate programs or products, this web site rotator script will save you a huge amount of time and effort, aswell as saving you money on advertising costs. Use the Codefu web page rotator script to test your landing pages so you can tweak your advertising campaigns to increase your advertising ROI. This link rotator script is flexible enough that it has many applications wherever web traffic distribution is needed to Avoid dead-links, Hide affiliate links, and Co-Op Campaigns.
