Email	{value_email}

Will transform automatically Macintosh filenames stored on a Windows NT or 2000 Server volume, removing illegal characters and adding filenames extensions; With this Mac to PC conversion Windows can identify the appropriate applications associated with renamed files. MacNames works as well a Windows NT 4.0 or Windows 2000 Service. It runs with Microsoft Services for Macintosh (MacFile), Cyan Software MacServerIP or Intergraph ExtremeZ-IP. Option to include sub-folders in renaming process, mapping of illegal characters (/, , , ?, *, etc.) that can be easily modified, correspondance table Signatures (Type/Creator) / Extensions easily editable. Used also to truncate filenames longer than 31 characters, allowing to view these files from Macintosh more friendly than DOS shortnames (8+3). Can rename files and sub-folders. Can analyze batches of Macintosh files signatures in selected folders. Custom setting time interval for updates.
