Magellan is a powerful CMS (content management system) designed for Ampoliros. It is one of the most commonly used Ampoliros modules and serves as a Web gateway platform for many other Ampoliros modules. Magellan can handle sites of all sizes, from standard institutional sites to very large portals. Content is strictly separated from aspect and from code, and both are entirely administered through Magellan. With Magellan unique functions, it is possible to include many elements in the same page (like ecommerce products and cart, surveys, search box, login fields, news, etc.), while maintaining the same overall appearance. Magellan also supports P3P cookie privacy format.
