Magnish Image Gallery is an image gallery for postnuke, and is designed for displaying large quantity of images (great for communities). Magnish Image Gallery uses GD library to automatically create thumbnails. In this new release a config file has been added to smooth the installation and to increase configuration options. Moreover a "send to a friend this picture" is included, user permission, image description. Works almost "out of the box" with just a few variables to configure. Supports 0.70x and 0.71.x and up. You can also have a "members only" folder.
