Verify that sites who are supposed to be linking to you really are! Manage your reciprocal links, with the unique ability to look for links throughout entire websites instead of just individual pages. There are many link managers and reciprocal link checker applications out there, but they all require that you know exactly the URL where your link is located. The obvious problem is that if the remote website changes the URL or places their links on a different page you have to manually search the entire site! Our MaxChex Link Verifier software gives you the ability to spider entire websites in order to find and verify links. Just enter your website, the websites that link to you, and how many links you expect there to be on each site. The software does the rest! The sortable results list allows you to see verified links, missing links, and much more! An in-program browser allows you to view the webpages that link to you with the click of a button!
