Use all the potential of GDI+ in your ASP.NET Mobile Applications. You can use ImageDraw to deliver real time dynamically generated images such as charts, diagrams or any other graphical application. You will not have to create, never again, an image file for each image format supported by mobile devices. It renders an image file (*.wbmp-*.gif-*.jpg-*.png -*.bmp-*.ico-*.tiff) to the image format preferred by client mobile device.
