

News Management System

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

Create a system to display current news from a list of headlines. Uses the scripting.fileSystemObject instead of a database as an information source. This system uses ASP to read and write info into a text file and then format it into an html display. Updating this page is as easy as clicking the add your news button.
