

# NikoSoft WebMail

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

NikoSoft WebMail is a simple set of PERL scripts that provides standard mail functions for POP3 inbox management. It works using module Mail::POP3Client, and allows you to send and receive mails over the Internet. It is "secured" using POP3 authentication, ie mail can't be send or retrieved without initial correct authentication. MIME is supported.
