You can reduce your software MVP cost by 60% when you use Pellerex, a ready-to-use and source-included software ecosystem of Identity and Payment functions as well as three scaffolds across Mobile, Web, and API. It is built using Azure, Asp.NET 5.0, React, React-native and Azure DevOps. Traditionally if you needed to stand up your software quickly you'd go with less-code or no-code solutions or a word-press website, but when the time comes to scale and grow, there will be some limitations on how flexible and scalable your solution is. On the other hand, if you wanted to build from scratch, you would either need to spend a considerable amount of time developing your software foundation, or compromise on engineering best practices due to a lack of time and resources. Pellerex addresses the above challenges of time to market, cost of development and adoption of engineering best practices, by providing a ready to use source-included foundation which you can start building on top right away.
