

PHP Newsletter Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Affordable email marketing software for managing bulk email marketing campaigns and mailing lists. The newsletter subscription script helps you create customized subscription forms, manage multiple groups, and campaigns. The newsletter script is built in PHP and needs to be installed onto your server. Our PHP newsletter script is highly customizable and you can manage various options through the admin page. You can import subscribers or add subscribers manually. A smart update feature will not allow duplicating subscribers. You can also select the option to send confirmation emails if you want it. Moreover, with the email newsletter script you can customize the email subscription forms by selecting the available fields, schedule email campaigns for a later date and send emails in batches. The Developer License allows you to install and use the newsletter script on up to five domains. You can modify the script. Another option is the User license but it comes encrypted.
