phpFormGenerator

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

phpFormGenerator is an easy-to-use tool to create reliable and efficient web forms. No programming of any sort is required. It has the ability to create up to 100 form fields, and to add a variety of field types including text boxes, drop down selection menus, check boxes, radio buttons, passwords, freeform text areas, and file upload!. All field types are highly customizable. The form data can be sent to a provided email address, or stored in a database table (currently MySQL). A file-based database system is also provided for those who don't have access to a MySQL database server. Also included is an administration portal to be used with the stored form data. This management tool works with both the MySQL database and the file-based database created by the program.
