PHPLog

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

PHPLog is intended to become a lightweight log monitoring solution for home users, as well as a candidate for being distributed on larger networks and report to a central console. PHPLog is inspired by many of the other available log monitoring tools for Linux, but it draws mostly from wots (which in turn is inspired by swatch). The final functionality intended is exactly the one in wots, but with added flexibility.
