Building on the success of our Professional ASP book, this book brings the subject area bang up to date with its coverage of ASP 2.0, released as part of IIS4. Active Server Pages is the Microsoft technology which allows you to build pages dynamically, access databases easily and build secure commercial applications for use over the Internet. This book assumes a knowledge of the Internet and either JavaScript or VBScript. We cover the revised ASP Object Model and Components, then move on to look at ASP with databases, with Transaction Server and Components, with Mail Systems, with IE4, with Site Server and with Personalization Server. We also provide additional case studies to give you practical examples to adapt for your own use and a chapter focussing on the issue of securing your application.
