**Email** {value\_email}

RMail is a set of Java library and applets for sending and receiving e-mails. It supports SMTP, POP3 and MIME 1.0, and allows you to send text, html, attachments, images, etc. You may also send alternative versions in one e-mail (e.g. text and html). Includes applets and servlets for your web site and source code on registration. For jdk 1.1 or later
