Safermail

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Basically, it does the same work that a mailto: HREF would do but does it without exposing the email address to spammers. It checks if a web browser has requested the email address in keeping with several rules. If those rules are satisfied, it redirects the user to their mail client. ASP.NET Version Features: Allows mailto links that are not exposed to robots. C#/Access2003 driven. Easy set-up.
