The Scripting Modules are an advanced sequel to WinScripter v1.0 and provide a much higher degree of script customization, speed and greater support for CSS, DHTML, Javascript and HTML. Additionally, the program includes nearly twice the number of script generators (70) as well as a number of new and dynamic features providing you with total control over script creation. All scripts come with a built-in demo and an extensive help system accessible from within individual modules. Absolutely no programming experience is required and any script you create can be previewed in real-time.
