

Sending email with ASP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

In this article we demonstrate how to generate and send emails with ASP using CDOSYS - Microsoft's improved interface for SMTP email. You will learn how to send text and html emails, emails with attachments, use a remote server, load recipients from a database, set the priority / importance of an email and request a read/return receipt.
