<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Another aproach of combining existed AJAX frameworks under single Application Markup Language. WAML - Web Application Markup Language. WAML allows you to define your web application appearance and functionality by using simple XML like syntax mixed with HTML. The idea behind WAML is to simplify application functionality definition and provide flexible access to UI objects, data and communication services. WAML functionality build on top of existed AJAX frameworks available for public use.
