Slayer's Editor is a file editor that has syntax highlighters for over 30 different programming languages and has also on the fly highlighting for all of them. In addition in can manage different types of files at the same time. Also it has built in support for RTF files and has a toolbar with formating opperations regarding them. The support for RTF files is build around RICHED20.DLL making the editor able to even add objects to the file. It was originally based uppon YourPasEdit but since the start the program now is completelly different and much more powerfull. This is the result of nearly two months of studying the original YPE source code and then coding most of the functions again from the bottom up to improve and make them work better together and also to make it easier to add new features to the program.
