Usermanage

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

User Manage is a compact suite which can easily be used to any PHP script. We modeled it like a puzzle: there is the "core" that handles basic authentication, and then there are other modules that handle utility functions (e.g. a database handler that help top-level modules like the permissions handler). With usermanage, developers can build applications with the standard user authentication complete, and developers can drop-in modules to handle extra user information and add functionality.
