TraceMonkey is probably one of the most important tools a developer would have to use to ensure that the application runs as expected or would be optimized. Developed by Mozilla, this small application will help developers determine which functions runs fast and which functions runs slow. After determining those functions that need improvement, TraceMonkey will do what it was made for – compile the fastest functions and let it run on native code. Because the native code will be focused on the fastest, the users' resources will be focused on slower functions which will eventually increase the processing speed of the application. But increasing the speed of the
