Mobile Number	{value_mobile_number}
Email	{value_email}

Generally speaking, VevoPay serves an eCommerce application/storefront (for example: VevoCart) as a PCI compliant payment module. Instead of processing payment with your own system, you can easily integrate your application to process payment using VevoPay. This greatly reduces the effort in customization, reduce the time of development and become PCI compliant. To demonstrate, VevoPay runs independently and interact with eCommerce software (for example: VevoCart) and payment gateways/processors. (for example: PayPal, 2Checkout, RBS WorldPay, etc.) VevoPay can operate with various storefront application platform (ASP.NET, ASP, PHP, etc.) and is integrated with world famous gateways (for example: PayPal, 2Checkout, RBS WorldPay, etc.). It is designed to run independently as standalone application.
