Voicent gateway - Voice XML developer SDK

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Open standard based VoiceXML gateway for your telephony applications. Create your own inbound and outbound applications without low level telephony programming. Ideal for developing interactive voice applications such as the automatic phone reminder for hospitals. Voicent Gateway recognizes your voice over the telephone and carries out your commands accordingly. It can also read any text, such as email messages, to you over the phone, and it also accepts input (DTMF tones) from your telephone's numeric keypad.
