Wizz Computers ASP Guestbook

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is the ASP version of Wizz Computers Guestbook. It uses an ADO connection object, using an ODBC DSN to connect to the database. The ADO connection object has session scope and is instantiated in Global.asa. Before using the ASP version you'll have to ensure that the necessary ODBC DSN exists and you'll have to modify Global.asa to reflect your DSN, UID and PWD. The ASP version of the guest book was originally written to work with Informix, so if your implementation uses a database other than Informix, you might have to change the syntax of the SQL passed to the database.
