

# XML and Perl: Embedding XML in HTML

|                       |                        |
|-----------------------|------------------------|
| <b>Address</b>        | {value_address}        |
| <b>Contact Person</b> | {value_contact_person} |
| <b>Mobile Number</b>  | {value_mobile_number}  |
| <b>Email</b>          | {value_email}          |

This 6-page article explains what XML is, and what it can be used for. It also shows how to develop a Perl script to retrieve and display the contents of HTML embedded XML tags, and how to create a script that gathers news headlines from an XML file and creates an HTML news summary. Full source code for each script available for download.
