# XML to JSON Converter

| | |
|---|---|
| **Address** | {value_address} |
| **Contact Person** | {value_contact_person} |
| **Mobile Number** | {value_mobile_number} |
| **Email** | {value_email} |

JavaScript class is a simple XML to JSON converter and objectifier. It can be used with custom or public XML, REST APIs such as Last.FM, RSS and ATOM feeds, sitemaps, etc by converting the XML server responses to native JSON objects in the browser which are then instantly accessible by its simple to use JavaScript methods.
