XMLmind FO Converter (XFC for short) is an XSL-FO to RTF converter. It takes an XSL-FO source file as input and converts it to RTF. XFC preserves the structure of the original document (e.g. a list-block element is converted to an actual RTF list) and most of the presentation information (font attributes, indentation, etc). The output RTF conforms to version 1.6 of the specification. Output conformance was checked with MS-Word 2000. XFC is a pure Java application/library.
