Yet another Postfix Autoreply

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a script built for those wanting to allow a more dynamic Autoreply function for the Postfix MTA. Users can set a custom autoreply message for their mailboxes (the user interface is not included in the 1.0 version) as well as a time-frame within the autoreply message should be sent. A caching function avoids flooding of autoreplies being generated to the same senders of the original e-mail message. A MySQL database is required for this script to work correctly.
